KlambirBirdNest.id

The KlambirBirdNest.id application is an innovation in the swallow nest cultivation. Using IoT (Internet of Things) technology can provide convenience for farmers and entrepreneurs of swallow's nests in maintaining humidity and temperature inside the swallow building. We use several sensors such as sensors dht11 which serves to measure the humidity and temperature inside the building – swallow building, light sensor bh1750, and ammonia sensor to detect swallow droppings. The sensor will detect and retrieve data continuously so that the user can see changes and monitor temperature and humidity in real-time.

Wave Collector Swallow is an innovation in the sector swallow nest cultivation. Using the sound wave amplifier device Swallow is supported by speakers with a capacity of 400 Watt providing the ability to lure swallows come within a radius of several kilometers. Sound waves heard by the swallow will guide the swallow to come to the nest that has been provided.
